REACH – REACH publication no 2 published 16/9/2008

Dear Customer,

Subsequent to our first REACH publication in August of this year, as promised, we would now like to inform you about the latest project developments.

To recap: the REACH project team has been formed and have taken up their functions. Through regular meetings, the project team and the executive management is updated on the actual project standing. Key internal REACH contacts have been defined, their names and responsibilities will be published at later date. This is to enable them to have undivided attention on the work in hand. It is still not possible for us to hold individual discussions with customers or answer customer questionnaires.

We offer you an Information Portal, www.alunnatubes.com, on which we provide actual company specific REACH Information. It is here that, later this year, we will provide all necessary information concerning identification and safety data sheets for future deliveries.

We can confirm that numerous materials lists both in Purchasing and in Sales have been compiled and identified back to the relevant supplier. Subsequently, we have contacted all the suppliers and explained our procedures to them. It can be assumed that for the raw materials which we use like billets, primary aluminium ingots, pre-alloys, alloying metals, cast wire, secondary aluminium (classified as scrap), cold rolled strip as well as the billets produced by ourselves, all the alloys will be pre-registered with the applicable authorities in

Helsinki before the due date at the end of November this year. In doing so we will be able to benefit from the generous EU transition periods for the obligatory registration with them. These are dependant upon the quantities of the individual alloying elements found in the products which we sell annually.

In the course of the Aluminium Trade Fair in Essen, from September 23rd -25th, we will be again contacting our suppliers in this regard. Likewise, our customers will find us at our booth in Hall 7 Stand D 22 where we will be available to answer potential questions.

Our Homepage will keep you up to date. It is worth visiting not only because of REACH.

The next ALUnna Tubes REACH publication, REACH no 3, for both operative sites, ALUnna Tubes Limited, Redditch in Great Britain and Aluminiumwerk Unna AG, Unna in Germany will be available from 13.10.2008.

Yours sincerely,

ALUMINIUMWERK UNNA AG

Volker Findeisen
